[Exercise] Switch to new AdminCentral Layout

Goals

- Using the new AdminCentral's Applauncher Layout.

Results

- The start-up property is configured for using the new AdminCentral's Applauncher Layout.

Tasks / Procedure

1. Open page **author's instance start-up configuration**: `magnolia.properties`

> Detailed steps

a. **Navigate to the start-up configuration:**  
`/magnolia-training/magnolia-jumpstart/apache-tomcat/webapps/magnoliaAuthor/WEB-INF/config/default/magnolia.properties`

b. **Open** the 'magnolia.properties' file:  
Have a short look into the default start-up configuration of every Magnolia webapp.

ⓘ **Realize:** The `/WEB-INF/config/default/magnolia.properties` file defines all start-up configurations values.  
It is a full qualified file, containing all needed values for a successful startup.

2. **Change** the AdminCentral's **Layout** using the new one.

> Detailed steps

- a. **Add** to the 'magnolia.properties' file you opened in step 1 following configuration:

```
# Using the new AdminCentral layout
magnolia.applauncher.config.compatibility=false
```

3. **Add** an AdminCentral **Sticker**.

> Detailed steps

- a. **Add** to the 'magnolia.properties' file you opened in step 1 following configuration:

```
#Extra non default configurations enabled:
magnolia.ui.sticker.environment=Local Dev!
magnolia.ui.sticker.color=red
magnolia.webapp=Dev Author
```

This will be **result** after you **started in the next exercise** your Magnolia instance, in this "sticker information" in the AdminCentral's top bar:

- b. **Proceed** to the **next exercise** to **start** up Magnolia again:  
**[Exercise] Start Magnolia using CLI**
