[Exercise] Start Magnolia using CLI

Goals

- Know how to start Magnolia using Magnolia CLI.

Results

- Magnolia is started and the author & public instances are available.

Tasks / Procedure

- Start Magnolia using CLI command: `mgn1 start`

Detailed steps

Important:

If your Magnolia instances are already running, stop them use use **CTRL+C** to stop Magnolia. The start-up configurations we have added in the last exercise need a start to be used.

a. Navigate in your command line tool into the **folder** `'magnolia-jumpstart'`:
`/magnolia-training/magnolia-jumpstart`

b. Inside the **folder** `'magnolia-jumpstart'`, run the following **command** in your command line tool:

`mgn1 start`

c. After successful startup you see following alike console out:

```
26-Jul-2023 16:54:45.231 INFO [main] org.apache.coyote.AbstractProtocol.start Starting ProtocolHandler ["http-nio-8080"]
26-Jul-2023 16:54:45.243 INFO [main] org.apache.catalina.startup.Catalina.start Server startup in [68576] milliseconds
```

d. Log into the **author** instance (superuser | superuser):
<http://localhost:8080/magnoliaAuthor/>
See the AdminCentral sticker you added in the last exercise into Magnolia's start-up configuration:

magnolia™

Dev Author

e. Also **open** the **public** instance in a second tab:
<http://localhost:8080/magnoliaPublic/>
