

```
childNodeTypes: ## Defines what content belongs together with the main 'nodeTypes' and therefore will be served as one JSON response:
  - mgnl:contentNode ## The REST endpoint is by default JCR super-type aware of the defined 'childNodeTypes'. Using the value 'mgnl:contentNode' will
  - eventContent     ## The sub-node 'eventContent' has automatically as its JCR super-type 'mgnl:contentNode'.
  - eventAddress     ## The sub-node 'eventAddress' has automatically as its JCR super-type 'mgnl:contentNode'.
strict: true        ## Enabled 'strict' value disables using the JCR super-type for the 'childNodeTypes' configuration.
```
